Year 4 – Geometry – Calculating the perimeter of rectilinear shapes

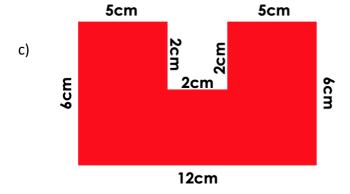

Remember...

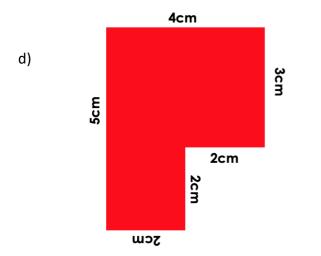

We calculate the perimeter by adding up the length of $\underline{\mathbf{all}}$ the sides.

1. Calculate the perimeter of each of these shapes.

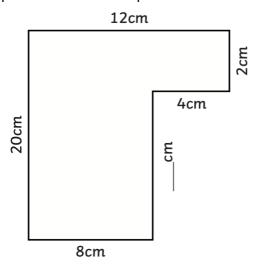

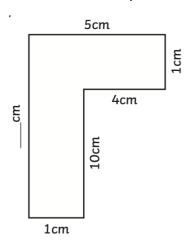

- 2. Using your knowledge of perimeter, calculate the missing length of each of these shapes.
- a) The perimeter of this shape is 64cm. What is the missing length?

b) The perimeter of this shape is 32cm. What is the missing length?

c) Use your knowledge of opposite lengths/sides to calculate the perimeter of this shape.
